COASTAL ENGINEERING

Contents of volume 35

Preface vii

Monitoring groundwater dynamics in the littoral zone at seasonal, storm, tide and swash frequencies
I.L. Turner 1
Status of measurement techniques for coastal sediment transport
T.E. White 17
Coastal engineering applications of high-resolution lidar bathymetry
J.L. Irish and T.E. White 47
Manometer tubes for coastal hydrodynamics investigations
P. Nielsen and S.L. Dunn 73
Shallow water directional wave gages using short baseline pressure arrays
G.L. Howell 85
An instrument for field measurement of wave impact pressures and seawater aeration
P.A.D. Bird, A.R. Crawford, P.J. Hewson and G.N. Bullock 103
Buoy pitch and roll computed using three angular rate sensors
K.E. Steele, D.W. Wang, M.D. Earle, E.D. Michelena and R.J. Dagnall 123
Instrumentation and prototype measurements at the Zeebrugge rubble mound breakwater
P. Troch, J. De Rouck and L. Van Damme 141

Research Papers
Transport rate under irregular sheet flow conditions
M. Dibajnia and A. Watanabe 167
Depth inversion in shallow water based on nonlinear properties of shoaling periodic waves
S.T. Grilli 185
Longitudinal current induced by oblique waves along coastal structures
A. Baquerizo and M.A. Losada 211
Measurements of the vertical correlation in turbulence under broken waves
C. Pedersen, R. Deigaard and J. Sutherland 231
Wave-induced mean flows in vertical rubble mound structures
I.J. Losada, R.A. Dalrymple and M.A. Losada 251
Unfluidized soil responses of a silty seabed to monochromatic waves
S.-Y. Tzang 283
